Working Paper	On the Program: A Gender Equality Initiative and Professional Visibility at Academic Conferences With Marina Gertsberg, Esad Smajlbegovic, Daniel Urban, and Patrick Verwijmeren. <i>Revise & Resubmit, Research Policy</i> <i>Abstract:</i> Persistent gender disparities characterize scientific careers. We study a gender equality initiative implemented at a leading academic conference, a key stage in researchers' careers where visibility, reputation, and professional networks are shaped. Using a difference-in-differences design that compares two major conferences within the same discipline, we show that a time-limited initiative encouraging the appointment of women as paper discussants led to a sharp but temporary increase in female representation in this prestigious role. The increase did not come at the expense of quality: female discussants on the conference program during the initiative had stronger publication records and comparable expertise-paper matches. The initiative increased female representation across the seniority distribution, with the largest gains among senior women, where pre-initiative underrepresentation was most severe. Senior women also took on a disproportionate number of conference roles. Over time, the pool of selected women broadened modestly to include scholars from lower-ranked institutions, and matched evidence is consistent with subsequent recognition gains for both senior and junior women.	

Our findings show that leadership-driven gender equality initiatives can meaningfully alter representation in high-profile academic roles, but that their effects are not necessarily self-sustaining.

Noncompete Agreements and Internal Labor Markets

Presentations: Tinbergen Institute Jamboree, ESE Cheap Thrills, Spanish Finance Forum PhD Day, Corporate Finance Day 2026 (scheduled), FMA 2026 (scheduled), and 7th RCF-ECGI Conference (scheduled)

Abstract: This paper studies how labor mobility restrictions shape firms' internal allocation of human capital. Exploiting staggered state-level variation in noncompete agreement (NCA) enforceability and matched employee-level data from Revelio Labs, I show that tighter restrictions increase internal promotions, with effects concentrated among workers in operations- and production-related functions and knowledge workers.

Organizational hierarchy also adjusts: small establishments add hierarchical layers and extend career ladders, while large establishments become flatter. At the firm level, NCA-sensitive firms increase assets and SG&A per employee. I provide evidence that hold-up alleviation and internal tournament incentives drive these patterns.

Together, the findings show that NCAs reshape the organizational structures through which firms develop and allocate human capital.
